Low Pass Filter Cleaner

Remove Dust from the Digital SLR's Low Pass Filter!

The **Low Pass Filter Cleaner** from Marumi Optical was designed to remove dust that has adhered to the low pass filter located in front of the cameras sensor as a result of static electricity.

It comes equipped with 2 cleaning tips made of a soft, washable polyurethane material. The square tip is best suited for the centre of the sensor and the spot tip is great for removing dust from the corners. Once the speck of dust is removed from the filter simply clean the tip by transferring the dust to the supplied cleaning matt located in the lid of the case. Both the tips and matt are washable. No liquids or cleaning agents are required. Made in Japan.

Code	Description	Suggested List
MA/706018	Marumi Low Pass Filter Cleaner (EMA-1675)	\$49.95

NOTE: Please be aware that Marumi Optical and EDMA Marketing accepts no liability for any scratching or damage while using the Low Pass Filter Cleaner. The use of this product is at the customers own risk. Please follow the instructions carefully.
